Description

Minimalistic and easy to print screwdriver holder. The holder and mount are separate pieces to maximize strength and for making it easy to print. Under 7 gram of filament for 1 holder and 1 mount.

- Mount piece printed flat because of strength
- Low filament usage
- Easy to print
- STP files

If you want it really to stay in place, you can add a drop of glue into the hole in the holder where the mount goes in.

I've adding a blank screwdriver holder without the hole, so you can customize for your screwdrivers.
